

SU Students: Think Before You Print!

Salisbury University students have printed 6,000,000 sheets of paper in our IT labs and library this academic school year (2013-2014).

- 6,000,000 sheets = 12,000 reams of paper per year
- 1 ream of paper = 500 sheets = 2.1" thick
- That's 2,100 feet of paper that SU students have printed this academic school year (2013-2014)

That's almost 4 times taller than the Washington Monument in D.C., and almost twice as tall as the Eiffel Tower!

If you were to stack the Washington Monument on top of the Empire State Building, and then put the Statue of Liberty on top of that, the stack of paper printed by students at SU would be the same height. That's a lot of paper!
