Examines theoretical base relating to conflict sources and conflict intervention. Provides a series of frameworks to place conflicts into various conflict maps and conflict models that will be used to analyze complex conflict dynamics. Theory frames conflict and practical intervention decisions. Theory and practice serve to inform each other in a cyclical, synergistic learning fashion.

The course will focus on slave narratives by Euro-American and African-American authors, in all forms of literature - poetry, short story, autobiography, novel, drama, and possibly film - from the colonial period to the present. We will explore why the slave narrative is a genre so flexible that it has maintained the public's and writers' interest for centuries. In addition, the course will cover key critical debates about the literature, relevant interdisciplinary theory, and the historical development of the genre.

Most of what we know about the adolescent experience has been learned from fictionalized stories in books, movies, and television programs, not from reading scholarly writings on the topic. Do these popular media portrayals accurately reflect the developmental lives of the majority of teens? Or do they exaggerate some experiences and ignore others? Approaching the question from a psychological focus, and incorporating the wide range of interdisciplinary work addressing the topic, we will explore what is known about the physical, emotional, and social development of the adolescent. Throughout the semester we will contrast that empirical information with the portrayal of adolescence in popular culture, including how that portrayal has changed over the past several decades. One emphasis of course projects will be to explore the possibility of using media resources in educational settings when teaching topics related to adolescence. Limited to Honors Program students. Satisfies Gen Ed IIIB Social Science requirement.

With the fall of the Berlin Wall and the break up of the Soviet Union, many international observers saw the chance for the dawning of a "New World Order", as President GHW Bush hailed it, an ideal constellation of world power in which the rule of law and universal principles would be used to resolve potential and real international disputes instead of force and violence. In the past quarter of a century, a very different picture has emerged. What led to the chaotic conditions in the Middle East, the Arab World, and the continuing unstable conditions along the East European-Russian borders? This course will begin by looking at past examples of World Order that prevailed in the period prior to 1989, then transitions to the effects of the breakup of the Soviet Union, the implosion of Yugoslavia and the emergence of a multi-polar world in the 21st century. Finally, we will explore the questions: What lies ahead, a new system of international balance or a return to old confrontational politics? Satisfies Gen Ed IIIB Social Science requirement.

The term "Main Street" is often used as a shorthand for an idealized image of the US and the concerns of ordinary Americans, yet Main Street has also sometimes been portrayed as the imagined home of our worst tendencies--pettiness, prejudice, and provincialism. In this class, we examine the significance of these contradictory visions of MainStreet by tracing the ways that they grow out of American literature, material culture, and popular entertainment. We begin with a study in nostalgia as we analyze the stylized and trouble-free townscape that Walt Disney designed for Disneyland in 1955. We then consider how critical representations of small towns in literature and film complicate the Main Street ideal. Finally, we turn to more contemporary renderings of Main Street in urban planning, commerce, and political discourse. In addition to producing critical essays, students will have opportunities to engage with civic organizations and businesses currently working to promote Main Street interests in the region.

The goal of this class is to look at a number of current and sometimes controversial topics of the Earth Sciences which students are likely to read about in the news. Differing viewpoints and ethical considerations are discussed. Examples include global warming, evolution, coastal development and fracking. In order to critically evaluate these topics, the class will review some of the basic philosophical tenets which underlie the scientific process. How are the approaches that scientists employ to view and understand the world similar to, and different from, those approaches taken by scholars in other disciplines outside the natural sciences? What kinds of questions can be answered by scientific methods, and what kinds of questions lie outside of the realm of science? Prereq: Admission to the Honors Program. Satisfies Gen Ed IVB Natural Science requirement.

Energy surrounds us everywhere, and we use energy every day in our lives. In fact, the rise of our current society has been largely based on learning how to use energy more efficiently and in different ways than in the past. This course will study the science behind energy; what energy is, what forms of energy exist, and how energy can be transferred from one system to another. We will look at where the energy we use comes from, and how those sources of energy have changed in the past and will change in the future. We will also discuss consequences of our past and current energy usage, with topics such as pollution and global warming. Energy is not only a scientific topic, but it also affects social, political, and economical issues. How energy has shaped out society and is shaping our society today in all aspects of life will also be studied and discussed. We will look at current energy conservation efforts, new types of renewable energy, and what individuals can do to help shape our society's needs and policies in the future. This class will be presented in lecture/discussion form, using some math, and with the help of everyday examples. Prereq: Admission to the Honors Program. Satisfies Gen Ed IVB Natural Science requirement.

In this course we will be investigating narratives of the late 20th and early 21st century and their relation to the historical period often, though roughly perhaps, referred to as The Postmodern. Examining a selection of novels that range from the more traditionally familiar to the more radically experimental, we will work to develop our understanding of the historical period known as the postmodern, the aesthetic and philosophical practices of postmodernism, and the peculiar position of existing amidst the postmodern condition. Some key questions we will deal with are: How do we define postmodern and postmodernism? How does the postmodern differ from the modern? Are all contemporary novels really postmodern? Why is there such fear and hostility to the ideas of postmodernism? And, perhaps most importantly of all, given our post-9/11 reality, are we still post modern? Limited to Honors Program students.

The focus of this class is on gaining an understanding of economic freedom, its antecedents, its components, and its consequences. In conjunction with the study of the components of economic freedom, deterrents to economic freedom will also be explored. A key element of the course will be an examination of economic freedom in various countries. This is a hybrid course. As such, much work will be done outside of the formal classroom. Information, assignments, readings, discussions, etc. throughout the semester will be posted on the class website on myclasses9.salisbury.edu. It is important to engage with this site frequently (several times a week). You also need to access your Salisbury email frequently. We suggest that students either be enrolled in the Honors Program or have maintained a cumulative grade point average of 3.5 or higher to enroll in this course.
